

# DATA AND DIGITAL GOVERNMENT STRATEGY

## 2030 Vision

The Australian Government will deliver simple, secure and connected public services for all people and business through world class data and digital capabilities.

### Setting the scene

Technology is central to everything that people, business and government do in today's world. The Government recognises the importance of data and digital capabilities to create more insightful data-driven policies and to deliver easy, accessible and secure services for people and business. As expectations and demand for public services grow, the Government is taking action to deliver better outcomes using data and digital technologies.

### What is the Strategy

The Strategy sets the vision to 2030 for how the Government intends to utilise data and digital to improve the entire spectrum of its activities. It will accelerate the Government's investment and uptake of data and digital technologies, build APS capability and support other initiatives such as the Government's APS reform agenda.

### All People

By putting people at the heart of service design, the Strategy will ensure the services of the future are designed in a way that works for them. Embedding appropriate management and transparency of our data use will help people feel confident their data is safe and feel empowered when engaging with digital services.

### APS

This Strategy supports our public sector agencies to keep up with technology, invest well, proactively leverage technology and adopt leading-edge data practices. It will be supported by an Implementation Plan, which every APS agency will be able to use in working towards our collective 2030 vision. Transforming the APS to a data-driven and digitally-enabled environment will deliver a modern government that can deliver better outcomes for people and business in the digital age.

### Business and Industry

Digital by design services will ensure interactions with Government are safe, simple and seamless. By focusing on delivering connected government services across the digital landscape, the Strategy will provide business, academia and industry with better access to data, information and services to enable them to do their work more effectively.

## ACTION MISSIONS

### Delivering for all People and Business

By putting people and business at the centre of the Government's use of data and digital the Strategy will lead to better informed policy and services which are connected, inclusive and accessible.

### Simple and Seamless Services

The APS works as a single unified enterprise by using the right technologies, data, and analytics to simplify how they deliver for people and business.

### Government for the Future

The Australian Government will be a world leader in using new and evolving data and digital technologies in innovative and collaborative ways to take advantage of opportunities and respond to emerging priorities.

## FOUNDATION MISSIONS

### Trusted and Secure

The Australian Government will partner with people and business to ensure decisions and services are trusted, transparent and ethical, with legislation that is fit for the digital age and supports people's choices when engaging with public services.

### Data and Digital Foundations

The APS has the right capabilities, practices, standards, and culture and makes effective use of data and digital technologies to operate a seamless and modern government.
